

PERSONAL ASTROLOGY GUIDE APP

Claude AI — Master Development Prompt

Core concept: Personal E-Jathagam + AI Life Guide

Build a private, account-based astrology application where each user has one personal profile containing birth details, calculated jathagam, palm information, life chapters, day/month/year guidance, good-day calendar, reports and a personal AI guide.

1. PRODUCT VISION

The app must feel like a personal digital jathagam, not a generic horoscope website. User enters birth information once, creates a profile, and can return anytime to access their personal guidance.

2. USER FLOW

Landing → Register/Login → Profile → DOB + exact birth time + birth place + gender → Automatic Jathagam Calculation → Palm Upload → Personal Dashboard → Life Chapters → Day/Month/Year Guidance → AI Guide → Reports.

3. CORE FEATURES

Authentication; Personal Profile; Jathagam; Palm Reading; Career/Job; Education/Study; Wealth/Finance; Love/Marriage; Family/Personal Life; Good Days Calendar; AI Guide; Reports/PDF; Email; Mobile/PWA; Settings; Security.

4. JATHAGAM ENGINE

Use a reliable calculation engine such as Swiss Ephemeris. Use Vedic/Sidereal astrology and Lahiri ayanamsha unless a justified alternative is chosen. Resolve birth place to latitude/longitude and timezone. Correctly convert local birth time. Calculate Lagna, Rasi, Nakshatra, planets, houses, Rahu/Ketu and Dasha where supported. Never ask an LLM to invent planetary positions.

5. ARCHITECTURE

Birth Details → Location/Timezone → Astrology Calculation → Structured Astrology Data → Traditional Interpretation → AI Explanation → Personal Guidance. Keep calculation, interpretation, AI and translation as separate layers.

6. E-JATHAGAM

Show birth details, Rasi chart, Lagna, Rasi, Nakshatra, planetary positions, houses, Rahu/Ketu, Dasha and traditional interpretation in a premium digital-book style.

7. LIFE CHAPTERS

Career & Job: opportunities, growth, job-change guidance and monthly/yearly guidance. Education & Study: exams, higher education, overseas study and learning guidance. Wealth & Finance: income, savings, financial periods and caution. Love & Marriage: traditional relationship indicators and compatibility. Family & Personal Life. Palm Reading: left/right palm upload and traditional observations such as life/head/heart/fate lines.

8. TIME-BASED GUIDANCE

Allow Year, Month and Day views. Provide Career, Education, Wealth, Love, Family and General guidance based on relevant traditional calculations, Dasha/transit information and interpretation rules. Never present predictions as guaranteed facts.

9. GOOD DAYS

Personal calendar showing favourable, neutral and caution days. Clicking a date shows that user's guidance for the selected date.

10. PERSONAL AI GUIDE

Not a generic chatbot. Use authenticated user ID, profile, birth data, jathagam, relevant Dasha/transit data and prediction context. Never access another user's data or invent missing astrology values. Respond in the user's selected language.

11. 7 LANGUAGES

English, Tamil, Hindi, Telugu, Sinhala, Punjabi and Kannada. Localise UI, chapters, AI, calendar and reports. Allow separate App Language and Report Language. Store astrology data once; translate the presentation.

12. REPORTS

Jathagam PDF, Palm report, Compatibility/Porutham report if feasible, and Yearly report. Support preview, download, share and email. Reports must support the selected report language.

13. DASHBOARD

Personal welcome, today's guidance, Career/Education/Finance/Love summary, quick access to Jathagam, AI Guide, Palm, Calendar, Reports and Life Chapters.

14. SECURITY

Secure authentication, password hashing, protected routes, user-scoped database queries, input validation, secure uploads, environment variables, HTTPS, account deletion. Never expose API keys. Never allow one user to access another user's data.

15. DATABASE

Suggested entities: users, profiles, birth_details, jathagam, planet_positions, houses, dasha, palm_readings, predictions, daily_guidance, monthly_guidance, yearly_guidance, reports, chat_sessions, chat_messages, language_preferences and notifications.

16. TECH STACK

Prefer a simple maintainable stack such as React/Next.js + TypeScript + Tailwind + PWA; Node.js/Express or Next.js API; PostgreSQL or MongoDB; Swiss Ephemeris; suitable LLM API; secure cloud storage; Vercel/AWS/DigitalOcean; secure email provider; JWT/session or reliable auth.

17. UI/UX

Premium, modern, calm, spiritual but professional. Dark navy/deep purple with gold/violet accents, subtle gradients and clean typography. Mobile-first. Avoid excessive decoration.

18. 9-DAY ROADMAP

Day 1: setup + UI. Day 2: authentication + profile. Day 3: astrology calculation. Day 4: jathagam UI + AI Guide. Day 5: life chapters + guidance + reports. Day 6: palm + Porutham if feasible. Day 7: 7 languages + email. Day 8: mobile/PWA + calendar + settings + cloud. Day 9: testing, security, bugs and deployment.

19. CLAUDE WORKING RULES

Do not rewrite working code unnecessarily. Do not delete working features. Keep code modular. Validate input. Handle loading/errors/empty states. Keep secrets out of frontend. Diagnose root cause before fixing bugs. Before architecture changes, explain why. Give exact filenames, complete required code, installation commands and testing instructions.

20. FIRST CLAUDE TASK

Do NOT code the whole app immediately. First produce a Master Architecture Plan containing feature list, user flow, system architecture, frontend/backend architecture, database schema, astrology pipeline, AI pipeline, multilingual architecture, reports, security, deployment, folder structure and 9-day roadmap. Then wait for approval.

COPY-PASTE PROMPT TO START CLAUDE

Read the attached Personal Astrology Guide App Master Prompt completely.

You are my senior full-stack engineer, UI/UX designer, database architect, astrology-engine integration engineer, AI integration engineer and testing engineer. First, create the MASTER ARCHITECTURE PLAN requested in the document. Do not write the whole application yet. Show the final feature list, user flow, system architecture, frontend/backend architecture, database schema, astrology calculation pipeline, AI pipeline, multilingual architecture, report architecture, security architecture, deployment architecture, folder structure, and 9-day roadmap. Identify any risks or unrealistic features for a 9-day MVP and propose priorities. Then stop and wait for my approval.

Day 1 starter prompt:

After I approve the architecture, start Day 1 only: project setup, folder structure, design system, landing page, login/register UI, dashboard UI, mobile-first navigation and reusable components. Do not implement astrology or AI yet. Give exact filenames, complete code, commands and testing steps. Do not move to Day 2 until Day 1 works.
