

PERSONAL ASTROLOGY GUIDE APP

Claude AI — Master Development Prompt

Product: Personal E-Jathagam + AI Life Guide

Use this document as the master instruction for Claude. Build the application step-by-step over approximately 9 days. Do not generate the whole application at once.

1. CORE PRODUCT IDEA

- The app is a private, account-based Personal Astrology Guide. Each registered user has one personal profile containing birth details, calculated jathagam, palm information, life chapters, day/month/year guidance, good-day calendar, reports and an AI guide.
- The app should feel like a modern personal application, not a generic horoscope website. A user enters their birth information once and can return later to access their personal E-Jathagam.

2. PRIMARY USER FLOW

- Landing → Register/Login → Create Profile → DOB + exact birth time + birth place + gender → Automatic Jathagam Calculation → Upload Palm Images → Personal Dashboard → Life Chapters → Day/Month/Year Guidance → AI Guide → Reports/Download/Email.

3. MAIN FEATURES

- Authentication: Register, Login, Logout, password security, forgot password, sessions, account deletion.
- Personal Profile: name, email, DOB, exact birth time, birth place, latitude, longitude, timezone, gender, preferred language, report language, palm images.
- Jathagam: Lagna, Rasi, Nakshatra, planetary positions, houses, Rahu/Ketu, Dasha and other supported traditional calculations.
- Life Chapters: Career/Job, Education/Study, Wealth/Finance, Love/Marriage, Family/Personal Life, Palm Reading.
- Time Guidance: yearly, monthly and daily guidance based on the calculated astrology profile and relevant traditional calculations.
- Good Days Calendar: favourable, neutral and caution days with explanations.
- AI Guide: personalised chatbot using the authenticated user's stored astrology data.
- Reports: Jathagam PDF, Palm report, Compatibility/Porutham report if feasible, Yearly report.
- Email: securely email generated reports.
- Mobile/PWA: responsive mobile-first interface and installable PWA where practical.

4. JATHAGAM CALCULATION

- Use a reliable astronomical/astrology calculation engine such as Swiss Ephemeris. Use Vedic/Sidereal astrology and Lahiri ayanamsha unless a justified architecture choice requires otherwise.
- Birth place must resolve to latitude/longitude and correct timezone. Convert local birth time correctly before calculation.
- Calculate where supported: Lagna/Ascendant, Rasi, Nakshatra, Sun, Moon, Mercury, Venus, Mars, Jupiter, Saturn, Rahu, Ketu, houses and Dasha information.
- Keep the calculation engine separate from interpretation and AI. Never ask an LLM to invent planetary positions.

5. PERSONAL E-JATHAGAM

- Create a premium digital-jathagam section containing birth details, charts, Lagna, Rasi, Nakshatra, planets, houses, Rahu/Ketu, Dasha and traditional interpretation.

6. LIFE CHAPTERS

- Career & Job: current period, opportunities, growth, job change guidance, strong/caution periods and monthly/yearly guidance.
- Education & Study: study, exams, higher education, overseas education, learning periods and guidance.
- Wealth & Finance: financial trends, income opportunities, savings guidance, caution periods and strong periods.
- Love & Marriage: relationship guidance, traditional indicators, compatibility and important periods.
- Family & Personal Life: family and general life guidance.
- Palm Reading: upload left/right palm, store images, traditional observations such as life/head/heart/fate lines and AI explanation.

7. TIME-BASED GUIDANCE

- Allow users to select Year, Month or Day. Generate structured guidance for Career, Education, Wealth, Love, Family and General life using relevant traditional calculations, Dasha/transit information and interpretation rules.
- Never present predictions as guaranteed facts. Use wording such as 'Traditional astrology suggests...' or 'This period may be favourable...'.

8. GOOD DAYS CALENDAR

- Provide a personal calendar showing good, very favourable, neutral and caution days. Clicking a date should show the user's guidance for that date.

9. PERSONAL AI GUIDE

- The AI is not a generic chatbot. It uses the authenticated user's profile, birth data, jathagam, relevant Dasha/transit data and prediction context. The AI must never access another user's data or invent missing astrology values.
- Example question: 'How is my career this month?' The system loads the user's own context, generates a personalised answer and responds in the user's selected language.

10. MULTILINGUAL SUPPORT

- Support: English, Tamil, Hindi, Telugu, Sinhala, Punjabi and Kannada.
- Language selection should affect UI, chapters, AI chat, calendar guidance and reports. Keep App Language and Report Language as separate settings. Store structured astrology data once; localise the presentation rather than duplicating the backend.

11. REPORTS

- Jathagam report: personal/birth details, chart, planets, Nakshatra, Rasi, Lagna, Dasha, interpretation and guidance.
- Palm report: palm image and traditional interpretation.
- Compatibility/Porutham report if feasible.
- Yearly report with monthly guidance.
- Allow preview, download, share and email. Reports must support the selected report language.

12. DASHBOARD

- Dashboard should show a personalised welcome, today's guidance, Career/Education/Finance/Love status, quick access to Jathagam, AI Guide, Palm, Calendar, Reports and Life Chapters.

13. SECURITY & PRIVACY

- Use secure authentication, password hashing, protected routes, authorization, user-scoped database access, input validation, secure image uploads, environment variables, HTTPS in production and account deletion.

- Never expose API keys in frontend code. A user must never access another user's astrology data.

14. DATABASE

- Suggested entities: users, profiles, birth_details, jathagam, planet_positions, houses, dasha, palm_readings, predictions, daily_guidance, monthly_guidance, yearly_guidance, reports, chat_sessions, chat_messages, language_preferences, notifications.
- Use user_id relationships and avoid unnecessary duplication.

15. RECOMMENDED TECH STACK

- Preferred options: React/Next.js + TypeScript + Tailwind + PWA; Node.js/Express or Next.js API; PostgreSQL or MongoDB; Swiss Ephemeris; suitable LLM API; secure cloud image storage; Vercel/AWS/DigitalOcean as appropriate; secure email provider; JWT/session or reliable authentication.
- Do not blindly use every technology. Choose the simplest maintainable architecture that can realistically be completed within 9 days.

16. UI/UX DIRECTION

- Premium, modern, calm, spiritual but professional. Suggested dark navy/deep purple with gold/violet accents, subtle gradients and clean typography. Mobile-first. Avoid excessive decoration.

17. 9-DAY ROADMAP

- Day 1: project setup, architecture, UI system, landing, auth UI, dashboard design, mobile layout.
- Day 2: registration, login, profile, birth details, database, authentication.
- Day 3: birth-place coordinates, timezone, astrology engine, jathagam calculation, planetary data, Rasi, Nakshatra, Lagna, houses.
- Day 4: jathagam UI, dashboard, Personal AI Guide and chat history.
- Day 5: life chapters, time-based guidance, reports/PDF.
- Day 6: palm reading, image upload, palm report, Porutham if feasible.
- Day 7: 7-language system, report language, email.
- Day 8: mobile/PWA, calendar, good days, settings, security, cloud storage.
- Day 9: full testing, bug fixing, performance, security checks and deployment.

18. CLAUDE DEVELOPMENT RULES

- Do not rewrite working code unnecessarily. Do not delete working features. Keep the app modular. Validate inputs. Handle errors and loading/empty states. Keep secrets out of frontend. Test every major feature. Diagnose the root cause before fixing bugs. Keep astrology calculation separate from AI interpretation and translation.
- Before changing architecture, explain why. When providing code, give exact filenames, complete required code, installation commands, environment variables and testing instructions.

19. HOW CLAUDE SHOULD WORK WITH ME

- I am an AI Engineering student. Do not dump the entire project at once. Work step-by-step. First explain the stage, architecture and files; then provide code; then tell me how to run and test it. Wait for my result/error before moving to the next major stage.

20. FIRST TASK FOR CLAUDE

- Do NOT start coding the whole application. First produce a MASTER ARCHITECTURE PLAN containing: final feature list, user flow, system architecture, frontend architecture, backend architecture, database schema, astrology calculation pipeline, AI pipeline, multilingual architecture, report architecture, security architecture, deployment architecture, folder

structure and 9-day roadmap.

- Then wait for my approval. After approval, start Day 1.

APPROVED DAY-BY-DAY PROMPTS

DAY 1 — Foundation & UI

We are starting DAY 1 of the Personal Astrology Guide App. Use the approved Master Architecture Plan. Build ONLY the foundation and UI: project setup, folder structure, design system, landing page, Login/Register screens, initial Dashboard UI, mobile-first navigation and reusable UI components. Do not implement astrology, AI or reports yet. Before coding, explain the stack, folder structure and commands. For every file, give the exact filename, complete code, placement and test steps. Do not move to Day 2 until Day 1 works.

DAY 3 — Jathagam Engine

We are now on DAY 3. Implement DOB + exact birth time + birth place → accurate astrology calculation → structured jathagam data → save to the user's account. Resolve coordinates and timezone correctly. Use Swiss Ephemeris or a reliable compatible implementation, Vedic/Sidereal astrology and Lahiri ayanamsha unless justified otherwise. Calculate Lagna, Rasi, Nakshatra, planetary positions, houses, Rahu/Ketu and Dasha where supported. Separate calculation from interpretation and AI. Do not invent planetary positions with an LLM. Show packages, installation, files, API, schema, example request/response and tests. Do not start AI interpretation until calculation is tested.

DAY 4 — Personal AI Guide

We are now on DAY 4. Build the Personal AI Guide. It must use the authenticated user's profile, birth details, calculated jathagam, relevant Dasha/transit data and current context. Flow: authenticate → load user's data → build context → call AI → save chat → return response. Never access another user's data. Never invent missing astrology values. Respond in the selected language. Clearly frame astrology as traditional guidance rather than guaranteed scientific prediction. Build chat UI, API, context builder, AI service, history, loading/error states and language support.

Final Product Vision: One user. One personal profile. One E-Jathagam. One long-term digital astrology guide — with Jathagam, Palm, AI Guide, Life Chapters, Good Days, time-based guidance, reports and 7 languages.
